

GLP X5 - Series Tech Note # 20260806		
Date:	6th August 2026	
GLP X5 series – Change Note		
Note	GLP is starting to deliver the X5 series from now on with a new LED.	
Details	We are transitioning to a new LED chip because the supplier has discontinued the previous model, meaning the shipping quantities required for stable production can no longer be guaranteed. The original LED will be replaced by a version with a slightly different binning. Thanks to our iQ.Gamut color control, you can continue using this fixture series seamlessly. While the new LED chip is matched as closely as possible to the original, minor variations may occur due to the different binning. However, the iQ.Gamut color control ensures that no differences will be visible in white and mixed colors.	
Starting Serial Number Range	Based on the first 3 digits of the serial number, fixtures with the new LEDs can be easily identified: impression X5: 122XX-XXXXX impression X5 Compact: 207XX-XXXXX impression X5 IP: 206XX-XXXXX impression X5 IP MAXX: 210XX-XXXXX
