LIVE IN COLOUR

Fantastic colours and natural color rendering at its best

RGB, RGBL and x,y colormix control

Natural reproduction of skin and face tones

Proprietary GLP iQ.Gamut Technology

IMPRESSION X5

HIGH EFFICIENCY OUTPUT WITHOUT COMPROMISE

The GLP impression X5 uses 19 powerful 40 Watt RGBL LED's to give an incredible output with increased color gamut.

GLP's new iQ.Gamut calibration algorithm ensures the impression X5 creates clean white points with CRI 86 at 6,500 K and the ability to switch to other fixed color temperatures instantly, all calibrated exactly to the black body line.

With new super-fast zoom mechanics, the impression X5 offers a 16:1 range running from 3.5° to 63° with homogenous light distribution across its entire range.

A new front face with a circular design offers a fresh modern look, a round aperture and has been designed to

include geometric patterns for great looking Pixel mapping effects.

The impression X5 comes complete with an extensive feature package, including a virtual color wheel with 64 referenced LEE Filters, a new Color Quality Control, Magenta / Green Correction, a Tungsten Simulation and Effect Channel and a double layer effect option.

Featuring GLP's trademark baseless design, the impression X5 weighs just 13.3 kg / 29.3 lbs. Its design also allows static front accessories or even electromechanical effect modules to be attached.

The impression X5 can be controlled via DMX, ArtNet or sACN and can be set up using Near Field Control.

IMPRESSION X5 COMPACT

HIGH EFFICIENCY IN A COMPACT DESIGN

The impression X5 Compact uses 7 powerful 40 Watt RGBL LED's to give an incredible output with increased color gamut.

The iQ.Gamut calibration algorithm ensures the impression X5 Compact creates clean white points with CRI 90 at 6,500 K and the ability to switch to other fixed color temperatures instantly, all calibrated exactly to the black body line.

The super-fast zoom mechanics, offer a 1:17 range running from 3.6° to 66° with homogenous light distribution across its entire range.

A circular front face offers a fresh modern look, designed to include geometric patterns for great looking Pixel mapping effects.

The impression X5 Compact comes with an extensive feature package, including new Color Quality Control, Magenta / Green Correction, a Tungsten Simulation and Effect Channel and a double layer effect option.

Featuring GLP's trademark baseless design, the impression X5 Compact weighs just 7.5 kg / 16.6 lbs. Its design also allows static and electromechanical front accessories to be attached.

IMPRESSION X5 IP

IMPRESSION X5 GOES OUTDOOR

The weatherproof impression X5 IP is an IP65-certified LED wash light featuring 19 x 40-watt RGBL LEDs and a light output of up to 11,400 lumens. The GLP iQ.Gamut color algorithm ensures precise color mixing and flexible color temperatures (2,500 K – 10,000 K). A motorized 1:17 zoom (3.6° – 63°) provides versatile application options, complemented by pixel mapping and dynamic effects.

The lightweight, compact design (< 21 kg) and control options such as DMX, RDM, ArtNet, sACN, and Lumenradio CRMX ensure ease of use. With its weather-resistant IP65-certified housing, the X5 IP is perfect for outdoor events, festivals, and touring.

The impression X5 IP delivers maximum flexibility and performance for creative lighting designers seeking uncompromising results in any environment.

IMPRESSION X5 IP MAXX

PERFECT COLOR CONTROL IN ALL SITUATIONS

The GLP impression X5 IP Maxx delivers an extraordinary luminous flux of up to 21,000 lumens, with an expanded colour space, from 37 powerful 40-watt RGBL LEDs.

Equipped with the new iQ.Gamut colour algorithm, the impression X5 IP Maxx generates a clean white point with a CRI 86 / TLCI 88 at 6,500 Kelvin. It also offers the option of quickly switching to other fixed colour temperatures, all of which are precisely calibrated to the colour temperature curve, while still offering a colour quality of CRI 85 / TLCI 75 even with warm white light of 3,200 Kelvin.

With the 1:19 zoom mechanism, the impression X5 IP Maxx delivers up to

3.3 Mcd light intensity, a penetrating 3.3° parallel beam and up to 66° homogeneous wash light.

The impression X5 IP Maxx comes with an extensive feature and effects package, including a virtual colour wheel with access to 64 colours from the LEE filter palette, new colour quality control, magenta/green correction, a tungsten simulation and effects channel and a 2-layer effect option.

Thanks to the IP65 certification, the fixture can be used both indoors and outdoors in any weather. The compact design, with a weight of less than 30 kg, is designed for easily installation in standard pre-rig truss systems.

IMPRESSION X5 BAR 1000

HIGH EFFICIENCY FOR IMPRESSIVE LIGHT CURTAINS

The GLP Impression X5 Bar is a linear LED batten with 18 powerful 40 W RGBL LED's, a wide zoom range, and the new GLP iQ.Gamut color calibration algorithm that creates perfect white spectrums with excellent color rendering.

The new squared lens design ensures maximum lumen efficiency and gives an unprecedented curtain of light at its narrowest angle of just 3.5°, and delivering smooth and homogenous washes all the way out to its widest 60° wash.

As a part of the new GLP X5 family it offers a wide feature package, including selectable calibrated white points, a tungsten simulation channel, magenta/green correction, virtual color wheel and variable CTC, along with twin layer effects with plenty of dynamic pattern macros. The Impression X5 Bar offers our patented fast tilt movement in combination with seamless pixel pitch across fixtures, and features wired and as standard.

IMPRESSION X5 IP BAR 1000

THE NEXT LEAP FORWARD FOR LINEAR LIGHTING

The GLP impression X5 IP Bar is an IP65 rated, linear LED batten with 18 powerful 40 W RGBL LED's, a wide zoom range, and the new GLP iQ.Gamut color calibration algorithm that creates perfect white spectrums with excellent color rendering.

The new squared lens design ensures maximum lumen efficiency and gives an unprecedented curtain of light at its narrowest angle of just 4.5°, and delivering smooth and homogenous washes all the way out to its widest 60° wash.

As a part of the new GLP X5 family it offers a wide feature package,

including selectable calibrated white points, a tungsten simulation channel, magenta/green correction, virtual color wheel and variable CTC, along with twin layer effects with plenty of dynamic pattern macros.

The impression X5 IP Bar offers our patented fast tilt movement in combination seamless pixel pitch across fixtures, and features wired and wireless control as standard.

The impression X5 IP Bar's enclosure is just as suitable for indoor use on the stage to protect against confetti, fog, pyro and dust.

WILD BAR 16

MAXIMUM PERFORMANCE

The GLP Wild Bar 16 is a powerful IP65-certified LED tilt bar, perfect for outdoor and event applications. Featuring 16x 40-watt RGBL LEDs, it delivers 6,000 lumens of light output. Its motorised 190° tilt and zoom range from 3.9° to 51° enable precise effects, from sharp beams to wide washes. Control is available via DMX, RDM, ArtNet, sACN, and GLP iQ.Mesh for maximum flexibility. Despite its robust build, it weighs only 22.6 kg. As part of the renowned GLP family, the Wild Bar 16 combines compactness, efficiency, and high performance for stunning lighting designs.

CREOS

FLEXIBILITY IN CREATIVE DESIGN

The Creos redefines versatility and performance in LED washlights! Equipped with 18 x 40W RGBL LEDs arranged in three rows of 6 pixels each, it delivers breathtaking brilliance and precision. Its motorized 1:12 zoom creates a powerful 4.3° beam with up to 673 kcd and an impressive total output of 7,600 lm, while the motorized head offers seamless 190° tilt for added flexibility.

A standout feature is its clusterable design, ensuring a uniform and homogeneous pixel pitch across multiple devices. Easily link units together to construct massive LED bars and create stunning, dynamic light curtains for truly awe-inspiring displays. The IP65-certified housing guarantees reliable performance in any

environment—be it indoor venues or outdoor events—offering full protection against rain, dust, dirt, fog fluid residue, and even confetti.

The GLP Creos is built for convenience and adaptability, featuring PowerCon True 1 In/Out, DMX 5pin In/Out, and two fail-safe EtherNet ports. The integration of GLP's robust iQ.Mesh system ensures unparalleled flexibility and ease of use, even in demanding setups. Compact at under 20 kg, the Creos is designed for effortless handling and everyday use.

With an exceptional price-performance ratio and fast ROI, the GLP Creos is the ultimate choice for professionals seeking powerful, reliable, and innovative lighting solutions.

MAD MAXX

THE FIRST 750 MM BEAM DIAMETER LED FIXTURE

The GLP MAD MAXX is the first LED-based fat-beam fixture with an impressive 750 mm beam diameter, comparable to 3 kW and 7 kW xenon beam lights. Designed for use as a sky beam or super-fat beam effect, it delivers massive light output with no visible external focus points. The CW version (ColorWheel) enables precise color adjustments with a 16-bit color wheel and CTO down

to 2,500 K. Users can adjust the beam diameter as needed with a virtual iris.

The compact MAD MAXX requires only 2,500 W, is IP65-certified, making it weatherproof and low-maintenance. Classified as a "NO LASER" device, it minimizes health risks and regulatory requirements, making it ideal for flexible and safe deployments.

S500 PROFILE HC & S500 PROFILE HO

PRECISE COLOR RENDERING AND VERSATILE FEATURES

With the impression S500 Series, GLP elevates the renowned 350 W moving head impression S350 to 500W LED power, delivering 30% to 65% more output. In addition, the optics, software, and all connections and controls have been updated.

The compact construction with the identical form factor and GLP's signature baseless design allows for seamless integration of the fixture into a wide range of applications.

The impression S500 Profile series is available in the following versions: The Profile HC version features a white LED engine delivering 26,000 lumens at a native 6,000 K.

It produces a highly balanced light spectrum for outstanding color rendering (CRI and TLCI above 90). This high light quality ensures natural and realistic skin tones and provides a total luminous flux of 10,700 lumens.

In contrast, the Profile HO version includes a white LED engine delivering 40,000 lumens at a native 7,000 K. The highly efficient light source of the impression S500 Profile HO generates more power for dynamic projections and mid-air effects, with a total luminous flux of 14,800 lumens.

S500 WASH HC

MORE OUTPUT AT WELL LOVED LIGHT QUALITY

With the impression S500 Series, GLP boosts the performance of the proven S350 moving light with 30 % more output. Optics, software, and connections have been updated to the latest standards, while the compact Baseless design and comprehensive feature set have been retained.

The S500 Wash HC delivers high light quality (CRI and TLCI over 90), natural color rendering, and homogeneous illumination, making it ideal for TV studios. The 500 W

white light LED provides 13,100 lumens with excellent color accuracy, complemented by a 185 mm fresnel lens and a zoom range of 6.9° to 40°.

Features such as CMY color mixing, CTC system, color wheel, motorized iris, and a precise framing system make the S500 an extremely versatile and powerful moving light. With a weight of 26.6 kg and quiet operation, it is perfect for noise-sensitive applications.

HIGH LIGHT-OUTPUT IN A COMPACT BASELESS DESIGN

The GLP impression FRI brings a powerful new level of versatility and quality with one of the most compact automated lighting packages available today.

Using a single, high powered 60 Watt homogenized RGBW LED at its core, the impression FRI features color mixing across a vast spectrum, whilst at the same time can project a crisp, punchy white light, with a full range of color temperature control. Optical quality is at the forefront with the impression FRI as it provides a clean, homogenized output at all angles, always giving a clean beam from center to its extreme edge. This consistency and attention

to detail allows the impression FRI to be used in a large range of applications where compromise is not an option.

A super-fast 3.7 to 35 degree zoom range gives full beam control over both short and longer throw distances, and because of its power, the FRI can project over a long throw. With quality comes accuracy, and in this area the impression FRI features 16 bit dimming and 16 bit position control through a range of 540 degrees of pan and 220 degrees of tilt. But with an added kick, the FRI also has the ability of bi-directional continuous pan rotation at varying speeds from slow and gentle to

extremely fast, for when a little something extra is needed.

A variety of dimmer curve options, along with a full PWM range and other settings are available from the on board menu with critical functions also available to control via the DMX signal.

The GLP trademark baseless design features on the impression FRI, and offers power in and thru connectors for ease of setting up multiple units. The base also features rubber feet for floor mounting, threaded sockets for coupler attachments and in built safety wire points.

THE LEGENDARY BASELESS MOVING HEAD

The impression X4 features 19 high power RGBW LEDs, each rated at 15 Watts with a 7 to 50 degrees zoom range. The housing design is based on the legendary, award winning, impression 90 and 120RZ fixtures including their baseless design and small footprint.

The brand new optical system gives a well-defined beam, complete with hard edge in the lower zoom range whilst remaining absolutely homogeneous and soft edged at wider angles.

RGBW color mixing, variable CTO and finely tuned dimming curves are standard in the impression X4.

The impression X4 features individually controllable LEDs, allowing a range of different patterns to be created and displayed on the front lenses, including arrows, numbers, letters and much more, either from stock patterns or through user created patterns.

SEAMLESSLY EXTENDABLE LED-BAR

The GLP X4 Bar10 and X4 Bar20 are high performance battens offering flexibility to today's lighting designer across multiple applications.

High output RGBW LEDs are packed tightly into a package that gives a full batten of light, with 20 LEDs used in the 1 meter long X4 Bar 20 and 10 LEDs used in the shorter 50 cm X4 Bar 10. High quality optics ensure a smooth, homogenized output across the batten through a broad pallet of pastel and saturated colors. This is supported by GLP's exceptional dimming quality which ensures that there is no color shift when fading, just smooth even output.

DMX control offers full pixel mapping capabilities, controlling every color in each LED and allowing a multitude of dynamic fades and chases through intensities and colors.

The X4 Bar10 and Bar20 both feature a fast 7:1 zoom ratio ranging from 7 to 50 degrees, giving broad cyc and wall washes down to a tight light curtain. The X4 Bar also features a motorized tilt, for fast refocusing or to be used to add more dynamics.

The GLP X4 Bar has been specifically designed to give consistent pixel spacing between adjacent units. An important visual aspect whether in audience view, or not.

The X4 Bar is fitted with PowerCON in and thru connectors for easy daisy chaining, rubber feet for floor mounting and ¼ turn omega attachments points for rigging flexibility.

THE BAR JUST GOT BIGGER

Following on from the ground-breaking X4 Bar series, comes the impression FR10 Bar, a linear format fixture that offers unrivalled output and creative control, whilst blending seamlessly in with the existing X4 Bar series.

With a new optical system, the impression FR10 Bar uses a larger size output aperture, as used in the impression FR1.

The FR10 Bar has a 9:1 ratio zoom range of 3.7 to 34 degrees, but what separates it from any other product on the market is the ability to control each of the zoom lenses individually and independently. This functionality brings a whole new level of creativity,

design possibility and flexibility to the concept of linear lighting.

At its' narrowest angles, the FR10 Bar produces clean, seamless flat sheets of light that are incredibly dramatic and piercingly beautiful, along with arrays of pin point beams of light. At wider angles, the impression FR10 Bar can wash areas and surfaces of stages, walls, cycloramas, and much more.

Utilizing the same physical construction as the industry standard X4 Bar 20, the impression FR10 Bar fits seamlessly with existing units in the market and uses the same rigging and interlocking systems for simplicity and future-proofing

of creative design. This also means consistent pixel spacing between fixtures when using multiple FR10 Bar together.

Power and data connectors are contained within the base of each unit for simple daisy chaining of multiple units.

The impression FR10 Bar is a complete new step forward in the development of automated linear lighting, yet allows perfect backwards compatibility, giving designers more flexibility than ever before.

PERFECT WHITE

The impression S350 is a LED Moving Head Profiler, with a uniquely designed full spectrum light source, which makes primary color more intense, pastel colors more natural, and colored objects and skintones more lively.

A comfortable optic zoom from 8 to 42 degrees provides an even and flat field with a considerable light output of up to 8,900 Lumen, with less than a 15% drop in output within the zoom range.

The compact fixture houses an 8-facet-prism, a light and heavy frost, a tiltable animation wheel and a fast fully closable framing system.

The impression S350 features GLP's unique baseless design with full 16bit pan and tilt movement, full range dimming, and shuttering capability. With a low weight of just 56 pounds, the impression S350 also features an in-built battery for fixture setup, an auto sensing power supply and the option to have wireless DMX control.

FRESNEL LED WASH WITH PREMIUM COLOR

The impression S350 Wash from GLP brings a new level of control and functionality to the mid-range LED wash light market. At its core, the impression S350 Wash utilizes GLP's white light LED engine, also used in its spot counterpart, the S350, and features a CRI of more than 90, with TM-30 and CQS measurements of 95+ for superior color rendering at its native 6,000 Kelvin color temperature.

The S350 Wash uses a Fresnel based optical system with zoom optics that give a range from 6 to 45 degrees for the broadest range

of flexibility. At any angle within the zoom range, users have access to a full 4 blade curtain framing system, where each framing blade can cross the entire beam independently for a full blackout. Combined together, any combination of the blades – including the ability to rotate the entire assembly through 90 degrees – allows you to focus the output onto precise and accurate areas of the performance area, with complete accuracy when returning time after time. For further beam control, a high speed iris is also included for additional options and effects.

The color engine of the S350 Wash is the same as its spot partner, allowing full color matching and variable color temperature control for seamless blending. A wide pallet of colors is achieved through a dichroic CMY system that is then supported by a fixed color wheel containing 10 slots, plus its open position. This is then complemented with a variable color temperature control system that allows a full range from 2,500 to 8,000 Kelvin to be achieved on either, or both, of the color systems.

PERFECTLY BRIGHT

Following our signature baseless design, the impression E350 features a higher color temperature of 7,500 Kelvin, giving stunningly bright projections. With its 30% brighter LED engine and very narrow iris, the fixture fits for a variety of applications and it is able to create sharp midair effects and bright gobo projections.

The optic offers a 1:5 zoom (8 to 42 degrees) and has a very even field with a remarkable light output of up to 12,200 Lumen.

The color mixing is done using CMY filters, which are specially calculated for the LED spectrum and provide a color mixture from pastel shades to deep saturated colors. If required, GLP's new CTC function provides continuous color temperature adjustment from 2,500 to 8,000 Kelvin.

The impression E350 also houses an 8x prism, a 2x frost, a tiltable animation wheel, two gobo wheels, a super tight 14-blade iris, and a 10-color color wheel. Of course, all functions can be used in combination with each other and make the GLP impression E350 the perfect tool for almost any application.

With a weight of only 56 pounds, the impression E350 is one of the real lightweights. The universal power supply, the integrated battery are as self-evident as the optional lumen radio CRMX adapter for wireless DMX.

THERE CAN BE ONLY ONE

The HIGHLANDER Wash is a brings a new level of high performance, high output and high quality from a compact discharge source fixture with a superior optical system.

Using a 1,400 Watt lamp and outputting through a 230 mm (9 inch) front lens, the HIGHLANDER Wash delivers a massive light output, without sacrificing quality. With a native color temperature of 6,000 Kelvin, the HIGHLANDER Wash optics have CRI, CQS and TM-30 quality indices all measuring 90 and above.

The optical system features a 7 to 1

ratio zoom with a range from a tight 4 degrees, out to 61 degrees.

Beam control is available through an independent motorized iris and a full feature framing system. This framing system gives 4 blade control with each blade being able to tilt on its axis and cross the entire beam. The entire beam framing system can also be rotated through a 90 degree range for optimum control.

The CYL Color mixing gives a full color pallet from pastel shades to full saturation. This is supported by two separately controlled color wheels,

each with 7 color positions plus open. The whole color output can also be temperature control anywhere from 2,700 to 6,000 Kelvin using a further separate dichroic based CTO system.

Additional control features of the HIGHLANDER Wash include smooth dimming with multiple user-selectable curves, separate shutter control with built in macros, fast 16 bit pan and tilt movement and an ECO operating mode.

EXO Hybrid 40

THE NEW HIGHLIGHT OF THE RELIABLE FAMILY

Thanks to a highly efficient 380 W white light LED engine, excellent optics with a 135 mm front lens and a zoom range of 3.8° to 46°, the FUSION Exo Hybrid offers plenty of light output for small to medium-sized stages as well as for outdoor applications and festivals. Features include a CMY colour mixing system plus separate CTO, 12 fixed colours and an additional 4 colour correction filters, two gobo wheels, an

animation wheel, a frost system and two combinable prisms.

The IP65-rated construction enables the full range of indoor and outdoor applications.

Powerful and equipped with a comprehensive package of functions, the new Exo Hybrid offers an excellent price-performance ratio and is therefore an extremely economical choice.

X5 atom

UNMATCHED VERSATILITY FOR ANY PROJECT, ANYWHERE

The GLP X5 atom is designed to be as versatile, powerful, and lightweight as possible. This compact fixture seamlessly fits into the tightest spaces while delivering big, dynamic coverage, making it an essential tool across industries – from TV, film, and corporate events to stage design, architecture, and concert touring. Equipped with high-output RGBL-LEDs, the X5 atom ensures perfectly calibrated, full-spectrum white outputs. The powerful 9:1 zoom ratio transitions smoothly from a 34° wash to a tight 3.5° beam, with even

color and light intensity distribution. Ready for all environments, the IP65-rated housing allows year-round indoor or outdoor use. The X5 atom also features a smart interlock system for quick connection, enabling flexible configurations – from singles to grids – while keeping individual control for each head. With a removable yoke and compatibility with industry-standard power infrastructure, the X5 atom streamlines setup and reduces environmental impact.

FUSION X-PAR Series

THE COMPACT ALL-ROUNDERS FOR ALL APPLICATIONS

The FUSION X-PAR Series comes with three versatile LED PARs in different power classes (180 W, 120 W, and 80 W). With their Fresnel Zoom Lens and the single Source LED RGBL, they together cover any application needed. The wide zoom range from 8.5° to 55° degree provides perfect beam control.

The housing is constructed for standing without bracket, making it possible to use the FUSION X-PARs as uplighter with narrow beam as well as a general lighting fixture with wide angle to light up whole areas. Additionally, the M12 Thread

placed on the back of the fixture enables vertical dropping and other mounting options.

With their fanless IP65 rated design, they are prepared for all uses in- and outdoor.

As part of the new range of GLP fixtures with the impressive GLP iQ.Gamut Technology, the FUSION X-PARs come with great color algorithm and calibration. In combination with the RGBL LED, they have the power to choose between Color Quality or Output to match any application.

INCREASED PIXEL VISIBILITY FOR TV APPLICATIONS

The FUSION Stick FS16 Z has a motorized zoom between 10° and 41° degrees. It is still the same size and dimensions as the FUSION Stick FS20, so all diffusers, including asymmetrical options, and accessories are available to use.

The Halo Ring is another innovation implemented to increase pixel visibility in TV applications. In all camera angles the single pixels are visible at any zoom position due to the ring around the front lens and still create stunning narrow beams.

The FUSION Stick FS16 Z features an IP rating of 65, allowing for full outdoor use regardless of poor weather conditions. To that end the Stick features a fanless design, which not only ensures the IP65 rating, but also enables silent operation for sound sensitive environments such as theaters or television.

The direct vertical hanging and standing are one of the key features to create stunning effects with less rigging effort.

No matter the application, the FUSION Stick FS16 Z is the right choice.

FUSION MBL – TECHNICAL DATA

The FUSION MBL is a tunable white floodlight with an adjustable color temperature range from 2,700 to 6,500 Kelvin. Due to the fanless concept the MBL is the ideal general light for fairs, events, sports or show areas or in all sound sensitive areas. The MBL is classified according to IP65, therefore dustproof and also suitable for outdoor use. The integrated diffuser improves the lighting properties of the LED by reducing glare and providing a homogeneous visual impression.

The direct selector switches can be used to set the most important color temperatures and fixed brightness levels without current. For the integration in installations the MBL can be controlled individually via DMX 512. For the use in the video/TV sector selectable PWM frequencies (up to 30 KHz) are at hand.

STROBES

JDC2 IP	68
JDC BURST 1	72
XDC1 IP HYBRID	74
JDC1	76
JDC LINE	78

**BIGGER.
BETTER.
BRIGHTER.**

THE SUCCESSOR TO THE LEGEND

THE DESIGN TOOL YOU'VE BEEN WAITING FOR!

GLP JDC2 IP is the new innovative hybrid strobe with more visibility, increased output and advanced creativity. The new integrated beam line is equipped with 84 high-performance LEDs which are highly efficient at 10 W each and produce a flash that is more powerful than ever.

The optimized, extremely steep flash ramps ensure an even more realistic and intense strobe impression. With 12 individually controllable segments, the beam line offers extended intensity flash effects and more than 100 static and dynamic strobe patterns.

With 1,025 cm² (159 in²) luminous surface, not only does the visual solid angle increase, but the visibility of the surface is perceived as larger and up to 25% brighter than the JDC1. The saturated colors and exceptional brightness of the 1,728 LEDs provide powerful diffuse lighting. This allows stages and spaces to be completely immersed in color. An impressive, rich color environment is created, especially when combined with haze. The specialized black LED masking ensures a black front appearance, while eliminating reflection from other light sources.

Of course, the two color plates can be addressed separately, in 12 or 24 individual segments. Additionally, the new JDC2 IP offers the ability to create breathtaking digital effects with an individually controllable pixel matrix. A built-in powerful Dual Cortex CPU with 3D graphic processing offers you a variety of impressive effects – the so called GLP DigiFX. With over 100 designed GLP DigiFX, the JDC2 IP provides an extremely wide range of digital content.

To go one step further, multiple effect manipulations can be applied in real time. This opens up endless creative possibilities for integrating the JDC2 into your show ... all without any media server or other external players.

Two fail-safe GigaBit EtherCon ports allow you to capture up to four different external NDI streams and display them directly on the JDC2 IP, without any dedicated interface, license-bound protocols or expensive video processors being required.

The head of the JDC2 IP is motorized with approx. 180° tilt and therefore can be perfectly aligned for thoughtful lighting design. The extremely robust housing in a modern design

is, of course, IP65-rated and suits both permanent indoor as well as temporary outdoor applications.

Of course, the GLP JDC2 IP also offers the innovative GLP iQ.Mesh interface with NFC Connect for exceptional ease of service. Extremely simple system integration and control of the internal effects and DigiFX allow users to focus on what it's all about – creative design!

STROBE LINE

Massive strobe flash impact
84 white strobe LEDs
Individual strobe segment control
Integrated flash intensity effects
Extended intensity beam-flash effects
Wide range of strobe pattern effects

RGB PLATES

30% more visible surface
Increased brightness
Intense deep saturated colors
Individual 12 / 24 segment control
Individual pixel control

GLP DigiFX ENGINE & NDI

GLP DigiFX real time manipulation
Up to 4 NDI Streams

THE NEXT EVOLUTIONARY STAGE OF THE JDC1

The GLP JDC Burst 1 is the evolution of the legendary JDC1, inspired by the JDC2. With three times the brightness, improved RGBW LEDs, and IP65 protection, it delivers maximum performance under all conditions. Color performance has been significantly enhanced: +120% in red, +60% in green, and +30% in blue.

Thanks to its segmented strobe line, RGBW LED plates, and motorized 185° tilt, the Burst 1 creates dynamic, impressive effects. It is maintenance-free, weather-resistant, and highly versatile, controllable via DMX, ArtNet, sACN, and GLP iQ.Mesh. Weighing only 14 kg, with ergonomic handles and flexible mounting options, it is highly portable and suitable for any setup.

WASH AND STROBE IN ONE POWERFUL FIXTURE

The XDC1 IP Hybrid merges two diffused, extremely powerful high-output strobe lines, with an ultra-powerful wash light, offering superior colour quality—all packaged in a weatherproof IP65 housing. Based on the innovative RGBL colour mixing of the X5 series, the XDC1 offers impressive light output and colour rendering quality. GLP's proprietary iQ.Gamut colour algorithm also guarantees white points perfectly calibrated to the

colour temperature curve in the XDC1. The 18 x 40W wash LEDs are arranged in three rows of six pixels each and, with a particularly narrow 10° optic, provide impressive mid-air effects, even at very long distances. A clever alignment system allows comfortable and fast setup of horizontal and vertical lines, up to complex, large-scale light objects.

THE ULTIMATE HYBRID STROBE

When you look for a strobe, you look for power. The JDC1 from GLP delivers power in excess through a versatile and highly creative design, the likes of which has never been seen before.

The JDC1 contains a traditional single tube element created with LEDs that produce an incredible clear, bright white output. This is then combined with a surrounding full face of RGB power, utilizing a large array of complimentary LED sources. The possibilities are endless as these two elements have independent

control and can be used as separate pieces, or combined for stunning effects.

Along with working as a powerful strobe light, both the tube and the full face sections can be run continuously for high output blinder and wash light effects, which never reduce output or have thermal cutouts.

To give even more functionality, the RGB face which can be divided into 12 separate 'pixel' sections, and additionally the bright white tube also can be divided into

12 sections and then the whole array can be fully pixel mapped through any standard controller.

The JDC1 also features dynamic movement with a 16 bit, 185 degrees tilt range, allowing you to place effects exactly where and when you want them to be – and get the most possible power and impact.

The JDC1 is a whole new class of strobe that offers an incomparable feature set that goes way beyond the definition of a hybrid.

THE HYBRID HIGHLIGHT-PRODUCT

The new JDC Line combines a powerful strobe line with a never seen powerful LED pixel mapping stick.

The JDC Line offers a much brighter RGB Pixel mapping effect mixed by a special 500 mm lens tube which gives great look and new design options.

The pixel pitch of the segments is 25 mm and the pixel are seamless next to each other. A super highlight feature is, that each pixel segment can be split into upper and lower part which gives additional creative options.

The second part of the fixture is a powerful strobe tube, well known from the JDC center beam LEDs. The JDC Strobe LEDs emit into the same lens tube as the RGB Pixel Mapping LEDs and also offer a segmentation of 25 mm for stunning dynamic effects.

The strobe and the RGB Pixel mapping output emitting through the same lens tube creates a very nice look and avoids seeing ugly separate LEDs or light reflections from white face LEDs.

HOW TO ROCK THE TUNNEL

In March 2021, a small GLP team transformed a dreary motorway underpass into a pulsating dance temple within a few hours.

Boogie Pimps ('Somebody To Love') were tasked with making the project a very special audiovisual experience. The duo not only contributed a track ('Awesome'), but also agreed to perform on site in the tunnel.

After the prerequisites for the implementation had been agreed with the authorities, a five-person GLP crew began setting up on the afternoon of 23rd March. With the help of a levelling laser and mobile scaffolding, over 200 GLP Creative Light 1's were precisely aligned on the tunnel wall within a few hours. Then the DJ set-up was arranged and the programming of the light show was given the final touches.

The Tunnel Video:

Although the staged light show in the tunnel looked highly professional and impressive, it was created exclusively with the help of the free Creative Light App.

Without any expensive lighting control, all devices communicated purely in the almost zero latency GLP iQ Mesh network. This network is created when the Creative Light 1 system is controlled via the smartphone app. It is generated in that all Creative Light 1's used receive and amplify the signal with one another.

„In this set-up we were able to impressively demonstrate the incredible flexibility of the Creative Light 1," said GLP product manager, Michael Feldmann. "The small device really fits everywhere and enables installations in places that would not be accessible for other lighting technology. The Creative Light 1 is the ideal tool that combines creativity, performance and flexibility in a coherent product."

CREATIVE LIGHT APP

The Creative Light App makes it possible to access the devices, read out information, update firmware and to do fixture configurations. Groups of several devices in the network can be formed and each of these groups can be controlled individually.

To set different light scenes, general brightness and intensity effects, fixed colors and dynamic color loops can be created. Building on this, a second layer can be called up with a preprogrammed effect pattern, the brightness and color can be adjusted and pattern layer intensity effects can be added.

THE KNV SYSTEM – FOR COUNTLESS DESIGNS

The KNV system from GLP brings a whole new dynamic to entertainment lighting, groundbreaking in both design and functionality. The four variants, the KNV Cube, the KNV Arc, along with the smaller KNV Line and KNV Dot, work as independent units or combine seamlessly together. In combination they provide a whole new level of versatility and freedom in design, all in an outdoor rated housing, allowing them to be used on a multitude of events and occasions.

A truly multi-functional fixture, the KNV system is equally happy being used as a pixel mapped surface, strobe, blinder, washlight, or scenic element.

SPORTS LIGHTING

ARENALED

92

ArenaLED1 Touring & ArenaLED3

WITH THE RIGHT LIGHTING TO THE HOME STRETCH!

The ArenaLED lighting systems offer solutions for professional sports and event venues, as well as for any kind of large-scale events that require dynamically innovative lighting for unforgettable visitor experiences. In addition to the prescribed conventional basic lighting, dynamic and color dynamic sceneries can be integrated at any time.

The core of the ArenaLED systems consists of an extremely efficient clusterable luminaire unit with high light generation efficiency.

The three heads within the

ArenaLED3 can be individually aligned to the lighting requirements. The modules are available as two mounting types (Type A and Type B). The ArenaLED1 Touring version has a single light head, an integrated power supply and DMX connection. The ArenaLED1 Touring bracket enables easy alignment of the light head.

The fixtures can be controlled in terms of intensity and light color (color version) via DMX. This means that brightness and light scenes can be easily adjusted.

Stage Effect FORCE 120

MAY THE FORCE BE WITH YOU!

Practical and useable in many applications, the Force 120 features a high speed, variable direction fan unit with internal RGB LED lighting. It incorporates a high torque motor technology for fast movement and quick speed changes.

Coupled with internal lighting, this unit is multi-use for dramatic effects, a fun addition as a unique scenic element, or just being used to move air in a rugged versatile housing. The Force 120 measures 140 cm / 4.5 feet square. The large diameter variable speed fan, which can run at speeds as low as 30 rpm right up

to 750 rpm, is designed to create stunning scenic effects, or be used as a great air mover. Internally, it features bands of LED tape which light the actual fan blades and can be controlled with differing levels of density, allowing multi-color projection onto the blades, or alternatively to turn them into a single striking element.

The Force 120 has an auto sensing power input, a sturdy construction, built in transport wheels and multiple rigging points, and secondary safety attachment points.

RAIN PROTECTION – AIR DOMES

The GLP impression Air Domes provide a secure enclosure for fixtures that need to be protected from the environment in an IP 54 package that is fast and easy to set up and remove.

With three sizes available, even small fixtures can remain unobtrusive, yet safely protected from rain, snow and other outdoor elements.

Auto sensing power input along with both 3 pin and 5 pin XLR data connectors allow the Air Domes to be used with a wide variety of fixtures on the market, and around the world.

Standard features on all Air Dome models include sensor controls to monitor air pressure inside the dome, with easily visible warning LEDs, holders for ground anchors, separate power controls for the fixture and the fan, along with 4 selectable fan speeds.

Each Air Dome can be floor mounted or hung down from a truss, and features safety wire points.

GLP Air Domes come complete with clear protective covers in respective sizes which attach quickly via a solid, reusable hook and loop system that requires no tools to setup, and allows the unit to take up very little space when being transported or stored.

to product overview

RAIN PROTECTION – RAIN COVER KITS

All Rain Cover Kits consist of the cover base and a cover in the sizes S, M, L or XL. They are open at the bottom and therefore also provide rain protection for powerful discharge lamps that would destroy a closed air dome. Depending on the version, the bases have different usable diameters and a maximum payload of 85 kg. The covers are also available in the shape of a truncated cone.

IQ.TOOL & IQ.TOOL PRO

The new GLP iQ.Tool is a compact, battery-powered service tool designed for the maintenance and configuration of DMX/RDM-compatible devices. The iQ.Tools simplify daily work with lighting systems through a range of smart features that can be controlled via an intuitive mobile app.

The GLP iQ.Tool stands out with its universal compatibility, working seamlessly with most DMX/RDM devices on the market. With Bluetooth Low Energy (BLE 4.2), the tool connects effortlessly to mobile devices. Its compact design, complemented by a robust protective case and a practical belt clip, ensures easy and secure handling in everyday use.

The also available GLP iQ.Tool Pro features a spectral light sensor.

DOP CONVERTER

With the new DoP Converter (DMX over Powerline), GLP is offering a unique system that can transmit up to 10 DMX universes via a single power cable.

DoP can be used wherever DMX data is to be transmitted, but where laying separate DMX lines is either not possible or not economical. GLP is thus providing a sensible alternative to standard wireless connections (WDMX, CRMX, etc.) that are sometimes susceptible to interference, when each requires a transmitter and receiver, and can be subject to limitations of the locally available radio network.

GLP's DoP is therefore particularly suitable for integration into existing infrastructure within the entire architectural lighting sector, especially in historic buildings, with existing power rail systems (e.g. museums, galleries, hotels, restaurants and retail) as well as in the lighting of public spaces.

The GLP DoP Converter is available in two different versions, each with three DMX outputs.
